## **1.0 EXECUTIVE SUMMARY**

### **1.1 Introduction**

The North Central Senior Housing (NCSH) development is located at the extreme eastern terminus of E. University Drive in the Town of Prescott Valley, Arizona. **Figure 1** depicts a location map for the proposed development. The predominate use of this project is best described, broadly, as a senior housing development. The senior housing components of the proposed development consist of 199 total beds for assisted living residents, 83 senior housing single family homes, and eleven (11) multi-family senior housing units. The site currently contains the Northcentral University. The existing building will be reutilized. Full build out of the site is anticipated to be three (3) years from approvals. Access for the development is proposed via both E. University Drive and the extension of N. Mendecino Drive to the western terminus of E. University Drive.

In accordance with Arizona Department of Transportation (ADOT) Policy Guides and Procedures (PGP) this study examines the morning and afternoon peak hour traffic conditions at the surrounding intersections with and without the proposed development. At the request of Town of Prescott Valley staff, a midday peak period was also evaluated. The off-site study area intersections were based upon direction from the Town of Prescott Valley. The following off-site intersections are included in the study:

- E. Superstition Drive at N. Navajo Drive
- E. Lakeshore Drive at N. Navajo Drive
- N. Navajo Drive at SR 69
- N. Mendecino Drive at SR 69.

In May 2023, a slightly less dense project senior housing project was proposed. A traffic assessment was prepared that primarily addressed the curv-thru potential of site generated traffic intruding into the Prescott Valey Unit 20 existing residential development (north of the site). This traffic impact study expands that initial traffic assessment by increasing off-site study area intersections and accounts for the proposed extension of N. Mendecino Drive.

### **1.2 Report Purpose and Objectives**

Pender Engineering has been retained by Richard Whitney/Platinum Realty Services, LLC to perform a traffic impact analysis for the proposed development.

The primary objective of this study is to evaluate the off-site study area intersections to determine if any capacity related improvements are needed to accommodate total traffic volumes at buildup of the proposed development. In addition, this study also addresses the redistribution of existing traffic volumes on the study area roadway network due to the proposed extension of N. Mendecino Drive.

Buildout assumes sale, construction, and full occupancy of the proposed development in order that the traffic impact is the maximum that can be expected.

### **1.3 Principal Conclusions and Recommendations**

At buildout, NCSH is expected to generate 1,316 daily trip-ends of which 75 are forecasted to occur in the AM peak hour and 113 during the PM peak hour.

The results of this study indicate that all off-site intersections are forecasted to operate at acceptable service levels at buildout of the project (except for N. Mendecino Drive at SR 69A).

The single lane southbound approach on N. Mendecino at SR 69 currently operates over capacity during the AM peak hour. Adding an additional lane to separate left turns from right turns only marginally improves existing conditions. In order to provide capacity for exiting traffic from both NCSH and Prescott Valley Unit 20, traffic signal control would need to be employed. It is not believed that forecasted volumes at build out of NCSH would satisfy MUTCD warrants for signalization.

It should be noted however, that field review at N. Mendecino / SR 69 (along with confirmation from ADOT staff) indicate that subsurface preparation has already been made to accommodate a future traffic signal at this intersection. As development continues, along the extended portion of N. Mendecino, a traffic signal will likely be the appropriate form of traffic control at the SR 69 intersection. Site generated traffic assignment and redistribution of existing traffic due to the N. Mendecino Drive extension was unconstrained in view of a future traffic signal at SR 69 at N. Mendecino Drive.

In view of a future signalized intersection, we recommend that an additional lane be added southbound on N. Mendecino Drive approaching SR 69. Storage length for this additional lane depends upon the extent of future development along the extension of N. Mendecino Drive.

## **2.0 DEVELOPMENT**

### **2.1 Site Location**

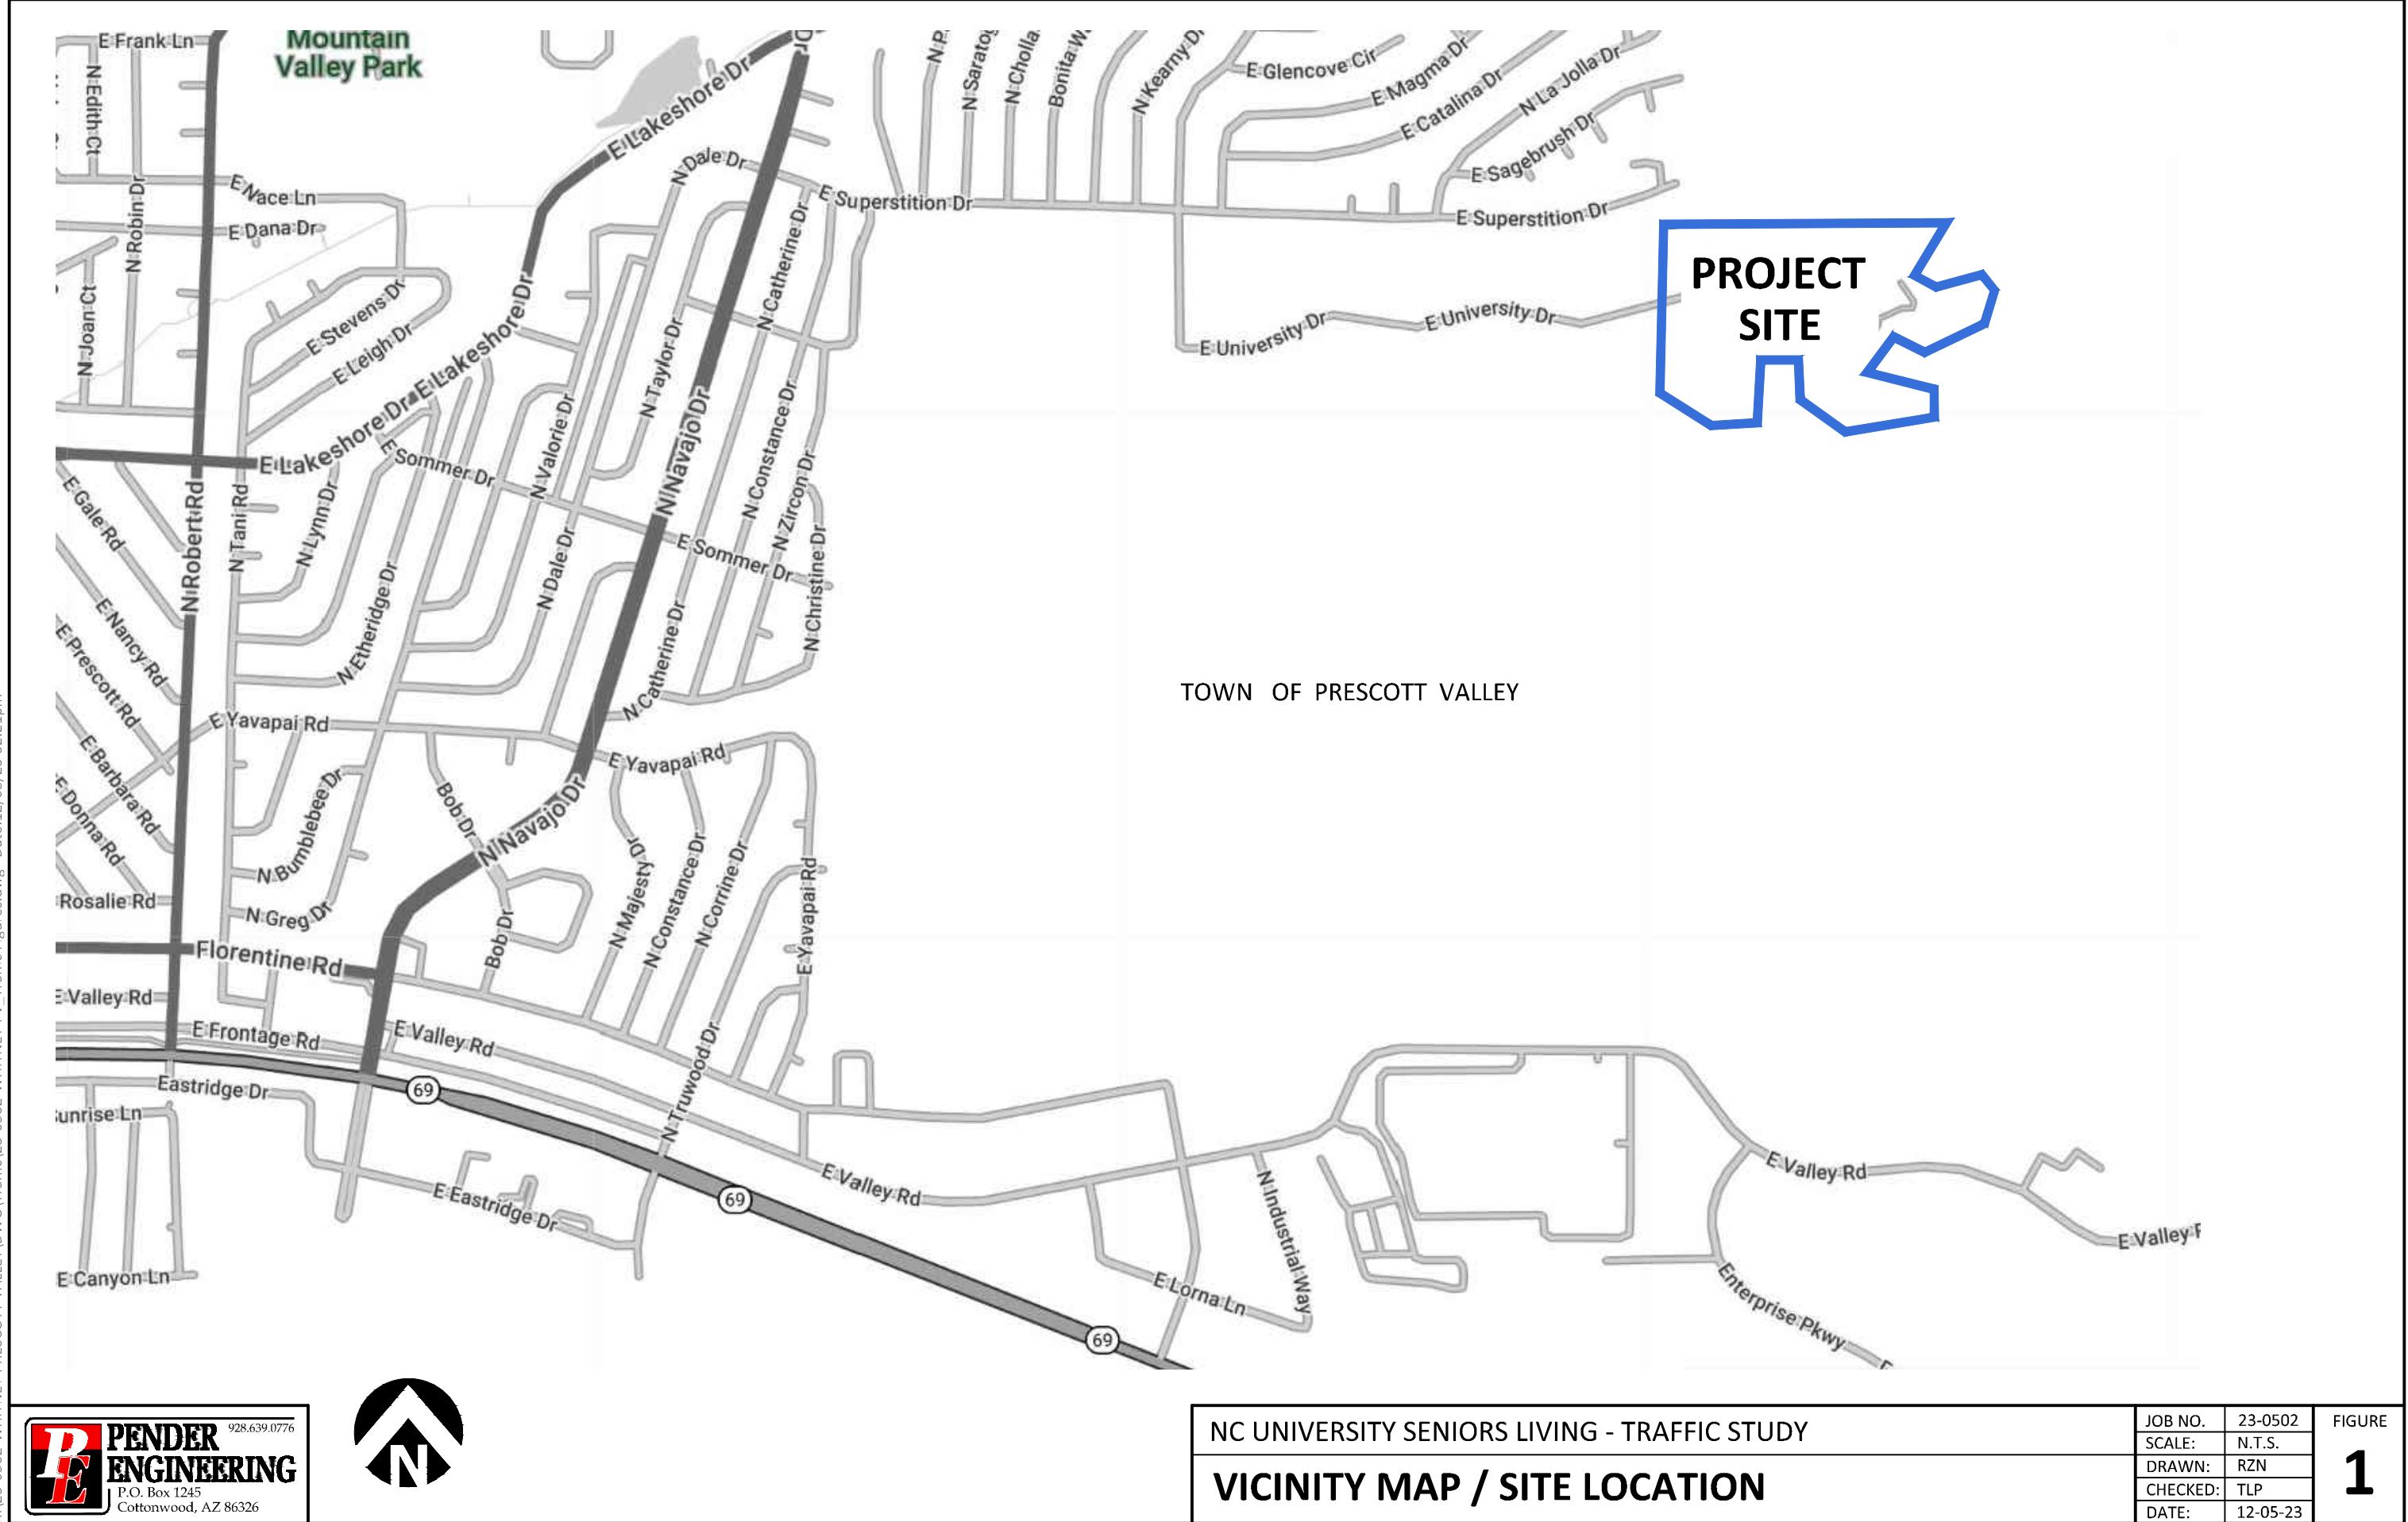

The North Central Senior Housing project is located at the extreme eastern terminus of E. University Drive in the Town of Prescott Valley, Arizona. The project location is shown in **Figure 1**.

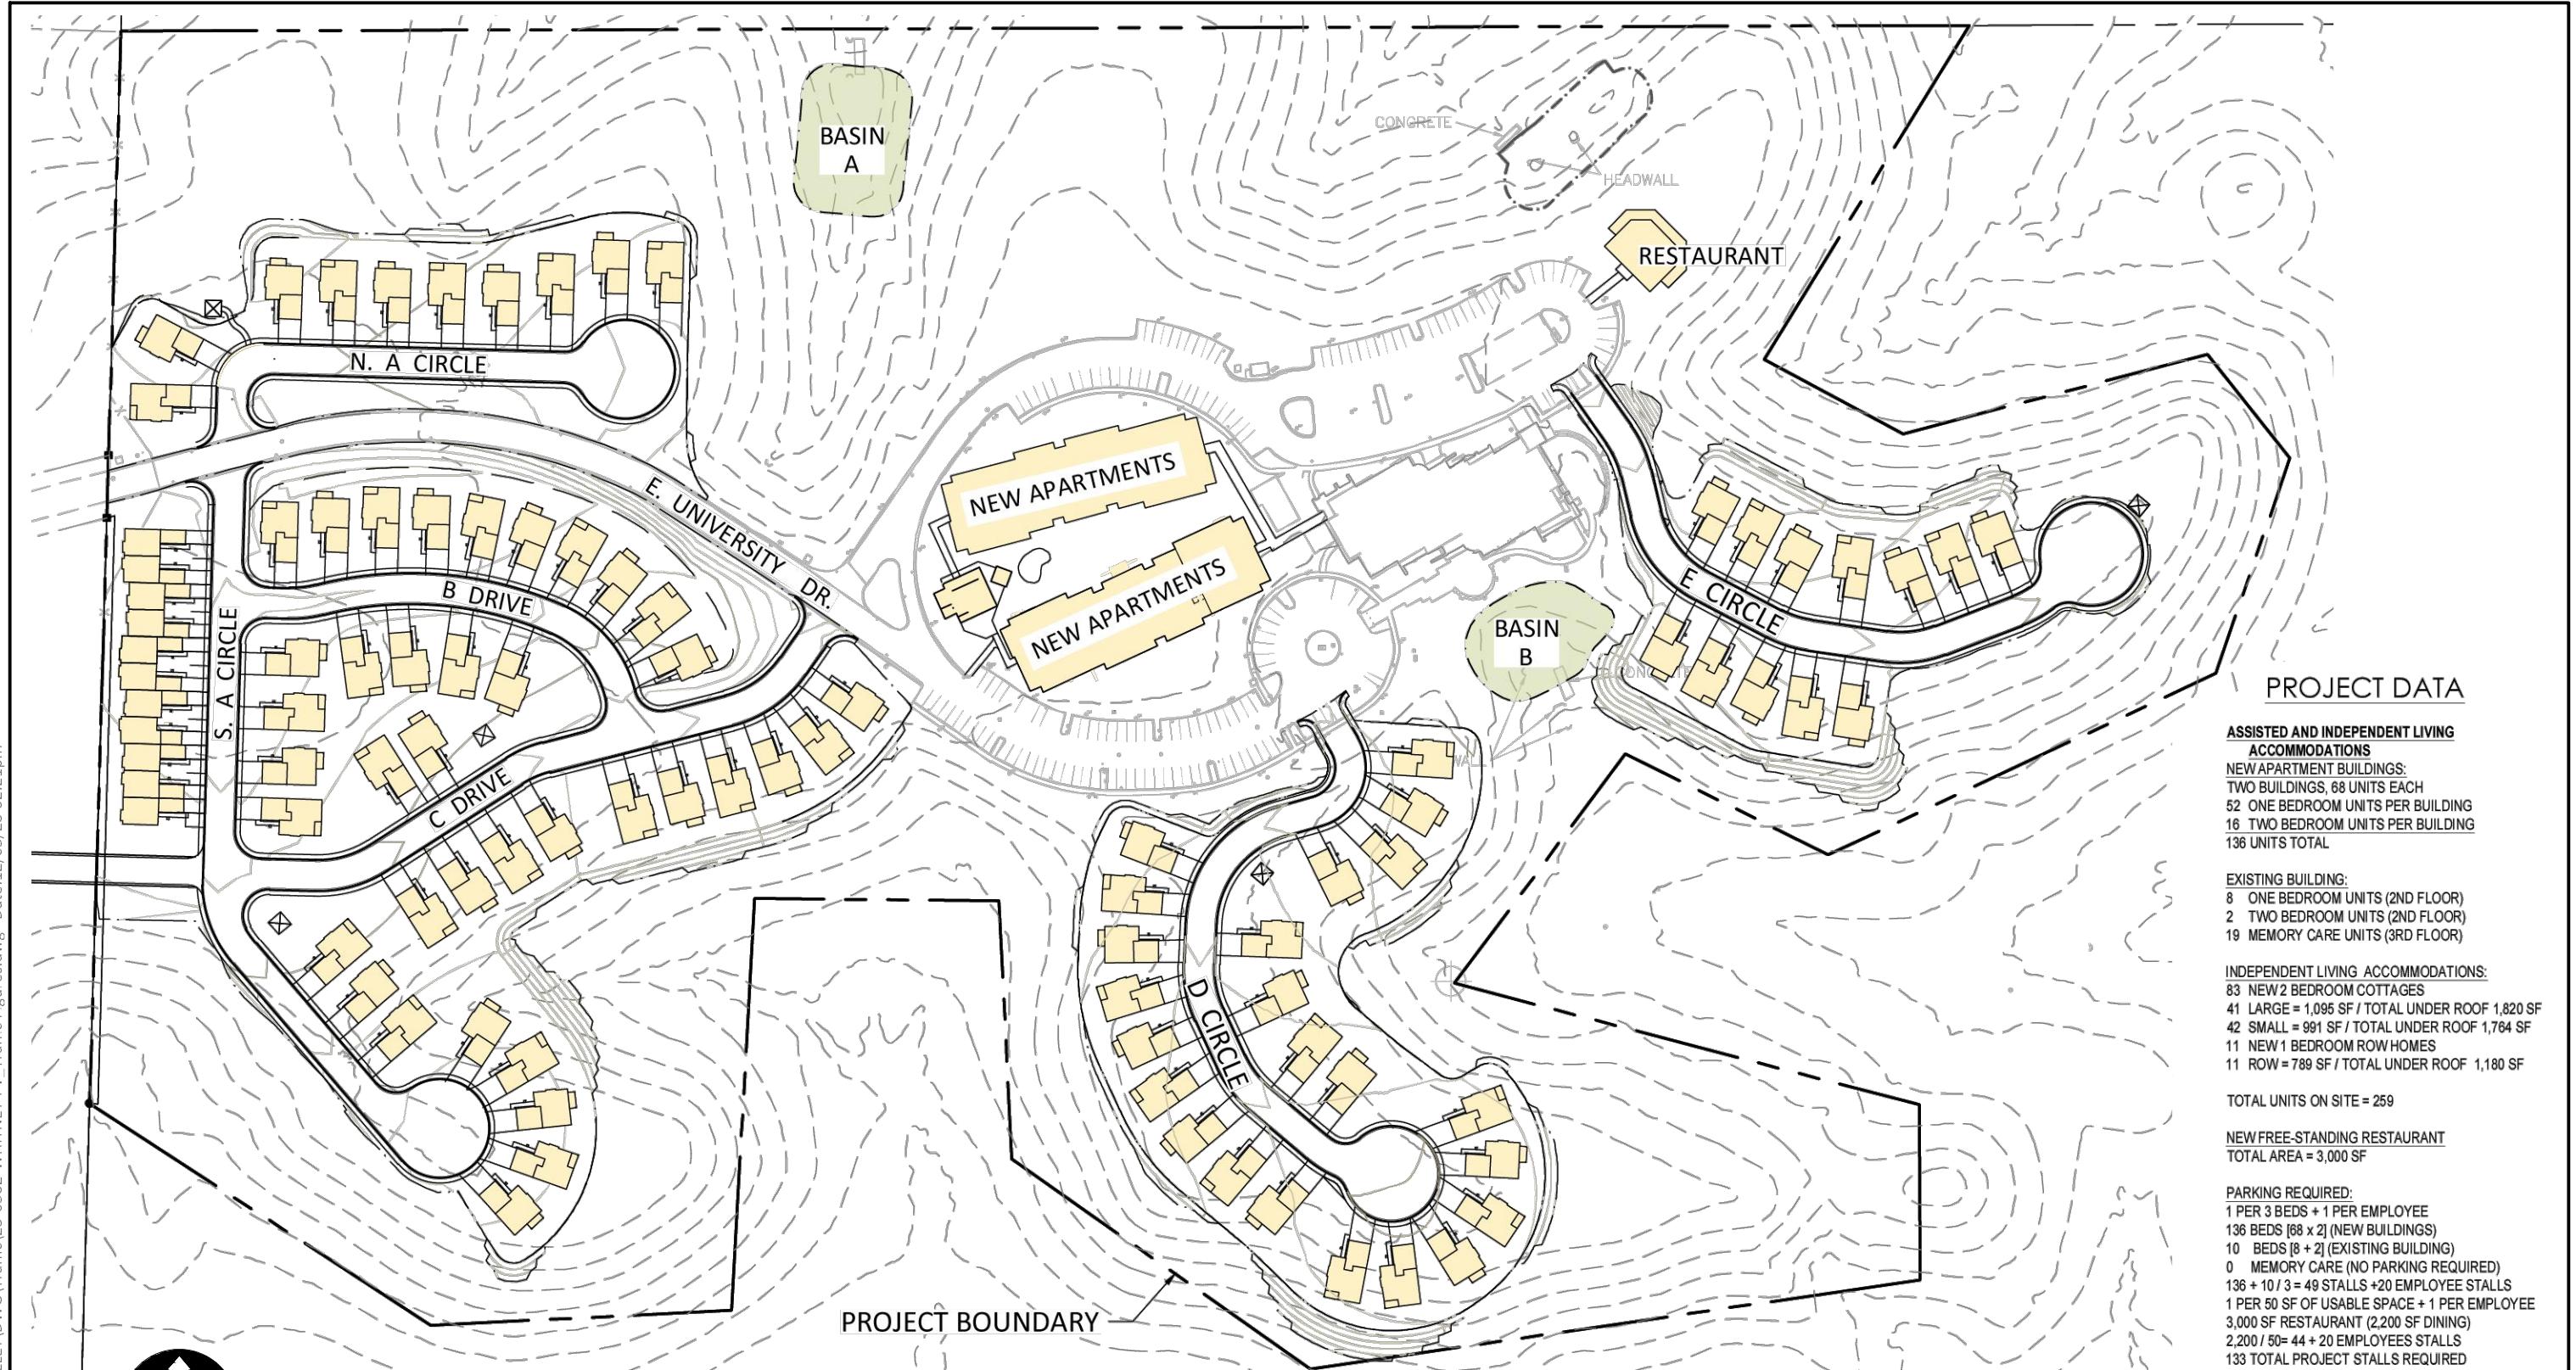

### **2.2 Site Plan, Site Access, and Circulation**

The site plan is shown in **Figure 2**. Buildout assumes full (100%) construction, sale, and occupancy of each component of the proposed NCSH development making the traffic impacts the maximum that can be reasonably assumed.

Site access is provided solely via E. University Drive. At the current western terminus of E. University Drive, all existing traffic must use N. Sheridan Lane to access E. Superstition Drive; however, the developer proposes to extend N. Mendecino Drive northwards from its current northern terminus (at Florentine Road) to align with the existing southern terminus of N. Sheridan Lane at E. University Drive.

As a result, the circulation patterns of existing traffic on the off-site study area network would likely change for neighboring land uses as a result of the proposed extension of N. Mendecino Drive.

CHECKED:	TLR
DATE:	12-05-23

## **3.0 EXISTING CONDITIONS**

### **3.1 Physical Characteristics**

E. Superstition Drive is a two-lane east/west collector street that serves both the proposed NCSH development and Prescott Valley Unit 20 subdivision. E. Superstition Drive extends from Navajo Drive from the west to the east where it dead ends. The daily traffic on E. Superstition is 3,591 vehicles-per-day. The speed limit of E. Superstition Drive is 25 mph.

N. Navajo Drive is a north/south major collector roadway that extends from State Highway 69 northward to just north of E. Lakeshore Drive. It is a median divided 4-lane facility with dedicated left-turn lanes at major intersections. E. Superstition Drive is stop controlled at N. Navajo Drive. The speed limit on N. Navajo Drive is 25 mph.

E. Lakeshore Drive is a two-lane collector street extending from N. Glassford Hill Road to the west, to Fain Road to the east. It is posted for a speed limit of 25 mph. E. Lakeshore Drive, just east of Navajo Drive has a daily traffic volume of 2,846 vehicles-per day. E. Lakeshore Drive is stop controlled at its intersection with N. Navajo Drive.

SR 69 functions as a primary arterial within the Town. It is posted at 55 mph and consists of two travel lanes in each direction separated by a raised median. Median openings are provided at the signalized intersection at N. Navajo and at the unsignalized "T" intersection at N. Mendecino Drive. At the signalized intersection of N. Navajo Drive, both separate dedicated eastbound and westbound left-turn and right turn auxiliary lanes are present. An eastbound dedicated left-turn lane and westbound dedicated right-turn lane also exists at SR 69 / N. Mendecino Drive.

N. Mendecino Drive extends north of SR 69 to Florentine Road. It is a two-lane commercial collector with a posted speed limit of 25 mph.

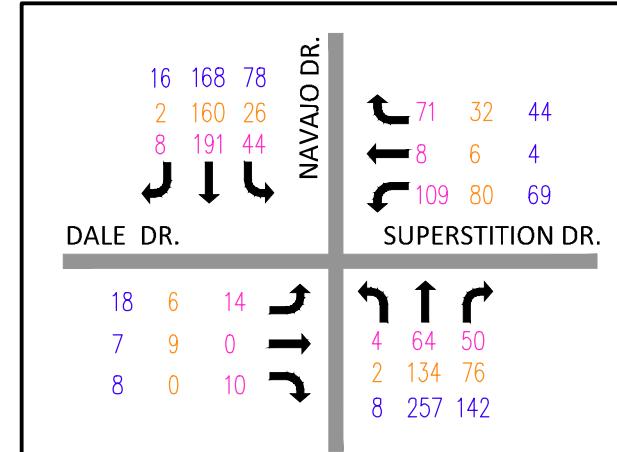

### **3.2 Traffic Volumes**

2023 peak hour turning movement counts and daily traffic counts were collected on October 17 and May 16 this year. The May counts were conducted for the traffic assessment earlier this year, while the October counts were associated for the expanded study area intersections along SR 69 (following the proposed extension of N. Mendecino Drive. No seasonal adjustments were made.

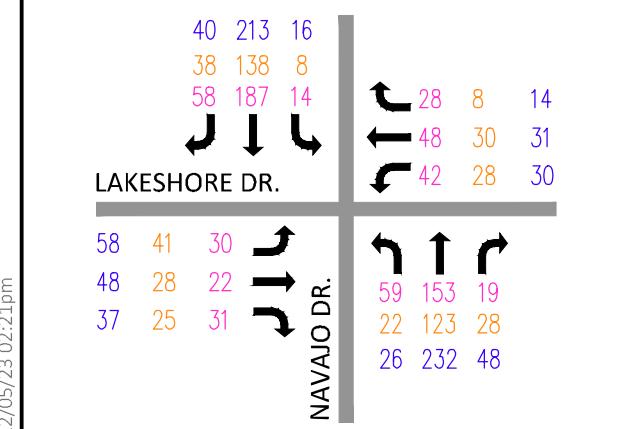

Turning movement counts were collected during both morning and evening peak time periods (7:00 AM and 9:00AM and between 4:00 PM and 6:00 PM). Midday counts were also collected (primarily from 24-hour daily counts). We defined the midday period, for the purpose of this analysis, as a time period on a weekday between 11AM – 1PM.

The peak hour consists of the four highest consecutive 15-minute intervals within the peak time periods. It should be mentioned that the two (2) intersections along SR 69 peaked at different times than the two (2) off-site intersections along N. Navajo Drive. For example, the study area intersections along N. Navajo Drive peaked earlier (during the PM period) than those along SR 69.

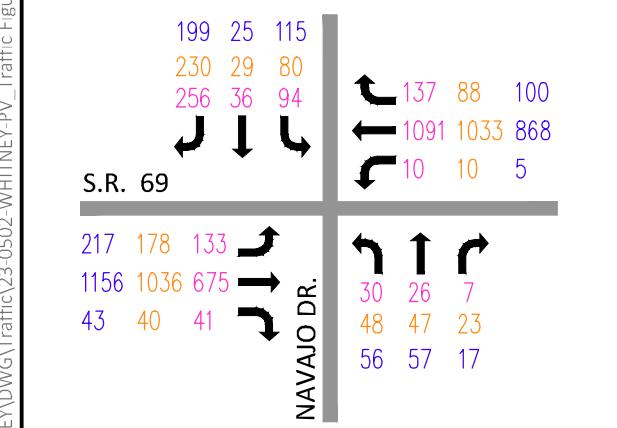

These existing peak hour counts are shown in **Figure 3**. All count data is included in **Appendix A**.

## 4.0 FORECASTED CONDITIONS

### 4.1 Trip Generation

Total daily, morning (AM) and evening (PM) peak hour trips expected to be generated by the development on a weekday were estimated based on information and procedures contained in the Institute of Transportation Engineer's (ITE) report *Trip Generation, Eleventh Edition*.

**Table 1** shows the trip generation of NCSH.

**Table 1 – Trip Generation (Total Trips/Trip Ends)**

Land Use	ITE Code	Quantity	Units	Daily Total	Weekday AM Peak			Weekday PM Peak		
					In	Out	Total	In	Out	Total
Assisted Living	254	199	Beds	517	21	15	36	19	29	48
Senior Adult Housing – Single Family	251	83	Each	506	11	23	34	23	15	38
Senior Adult Housing – Multi - Family	252	11	Each	36	1	2	3	2	1	3
Fine Dining Restaurant	931	3,070	GSF	257	2	0	2	16	8	24
<b>TOTAL</b>				<b>1,316</b>	<b>35</b>	<b>40</b>	<b>75</b>	<b>60</b>	<b>53</b>	<b>113</b>

NCSH, at buildout will generate 1,316 daily trip-ends of which 75 are forecasted to occur in the AM peak hour and 113 during the PM peak hour.

ITE nor any other recognized source, publishes midday trip generation for the proposed land uses on a weekday. As a result, midday trip generation was estimated by assuming 50% of both AM and PM trip generation. The result of this estimation is as follows:

- Midday Peak Trips In = 47; Midday Peak Trips Out = 46; Total midday trip ends = 93.

### 4.2 New Trip Distribution and Assignment

The primary site trip distribution patterns were assumed to be in general conformance with the directional patterns observed from the existing traffic counts within the off-site study area network. This study area network now includes the proposed extension of N. Mendecino Drive.

Site generated trips assigned to the study area roadway network are shown in **Figure 4**.

### 4.3 Redistribution of Existing Traffic

An analysis of the impacts related to the extension of N. Mendecino Drive to E. University Drive was conducted in order to determine how travel patterns/volumes would change due to this newly proposed roadway connection/extension.

This analysis considered both the existing density and residential street network configuration in the Prescott Valley Unit 20 subdivision. Prescott Valley Unit 20 currently contains a total of 847 single family dwelling units. Using the same ITE trip generation procedures cited in Section 4.1 of this report, the Prescott Valley Unit 20 development currently generates 7,204 daily trip-ends of which 521 occur during the AM peak hour of the adjacent street and 740 during the PM peak hour.

Based upon the current residential street layout/density within Prescott Valley Unit 20, it is estimated that approximately 46% of the entire residential subdivision have the option to use the

new/proposed N. Mendecino Drive connection. Yet not all of this 46% have origins or destinations to/from SR 69 to the south of the site. As a result, we have assumed that 46% of the trips entering Prescott Valley Unit 20 from the south at the intersection of N. Navajo Drive/ E. Superstition Drive would be redistributed to the extension of N. Mendecino Drive. Likewise, 46% of existing exiting trips on E. Superstition Drive that proceed southbound on N. Navajo Drive would use the extension of N. Mendecino Drive. We consider these assumptions to be the maximum extent of redistributed trip-ends.

Redistribution of existing traffic due to the proposed extension of N. Mendecino Drive is shown in **Figure 5**.

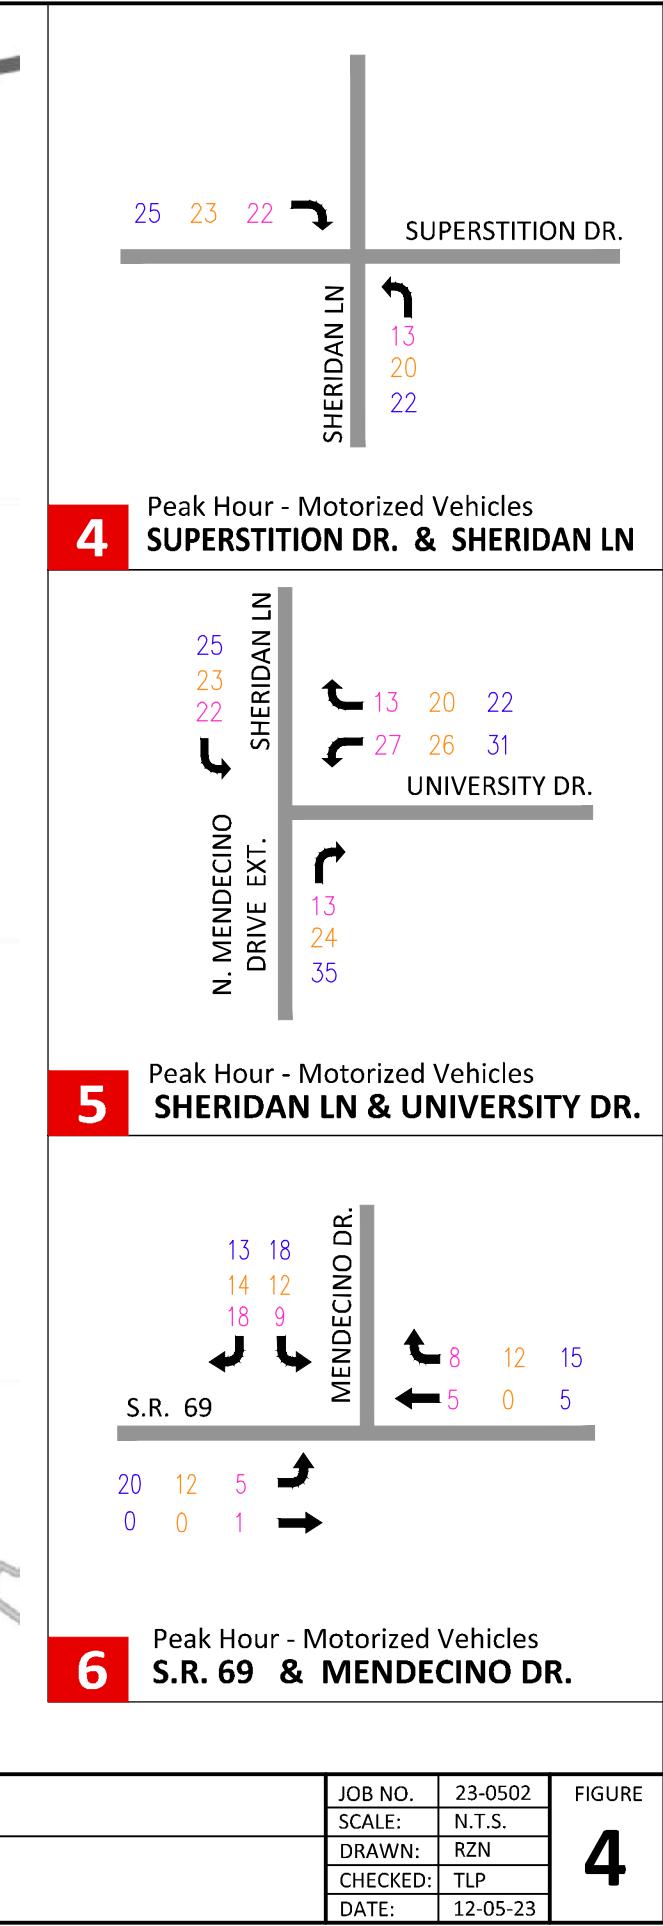

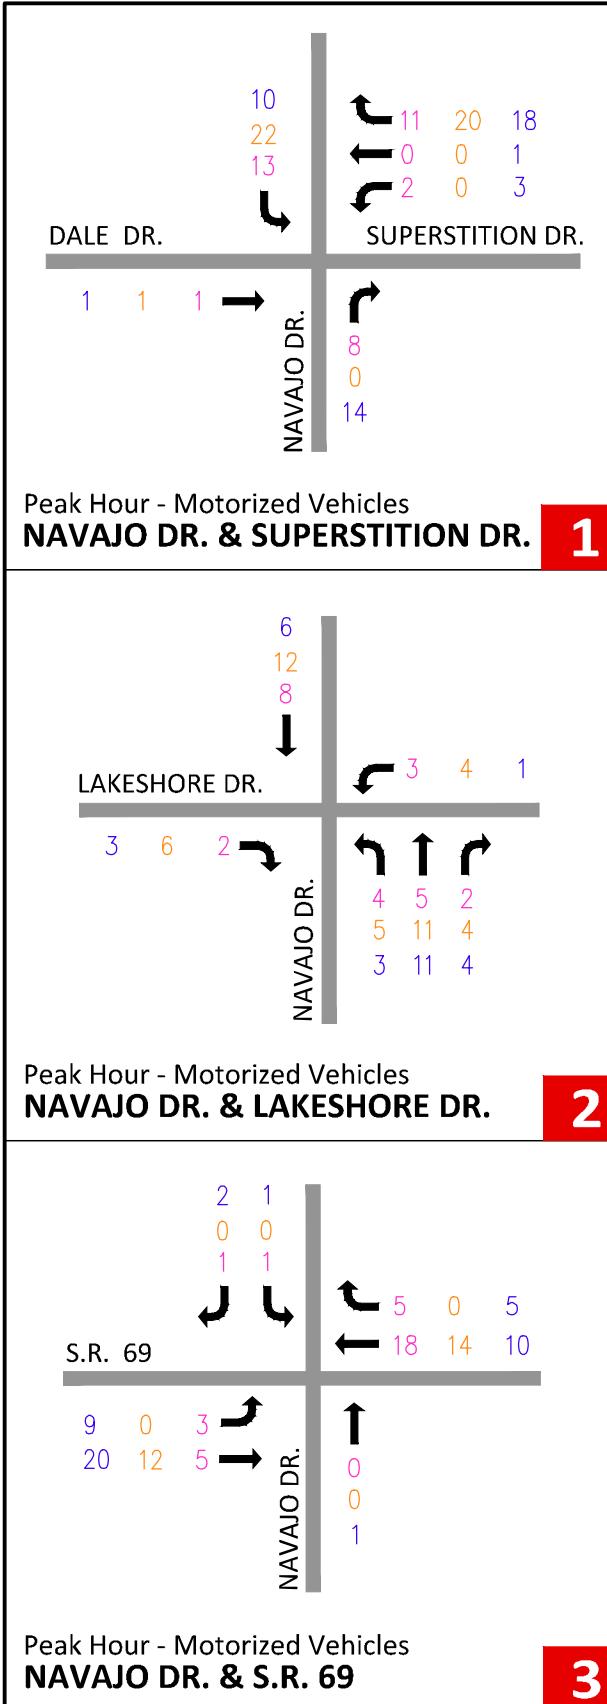

#### **4.4 Background Traffic**

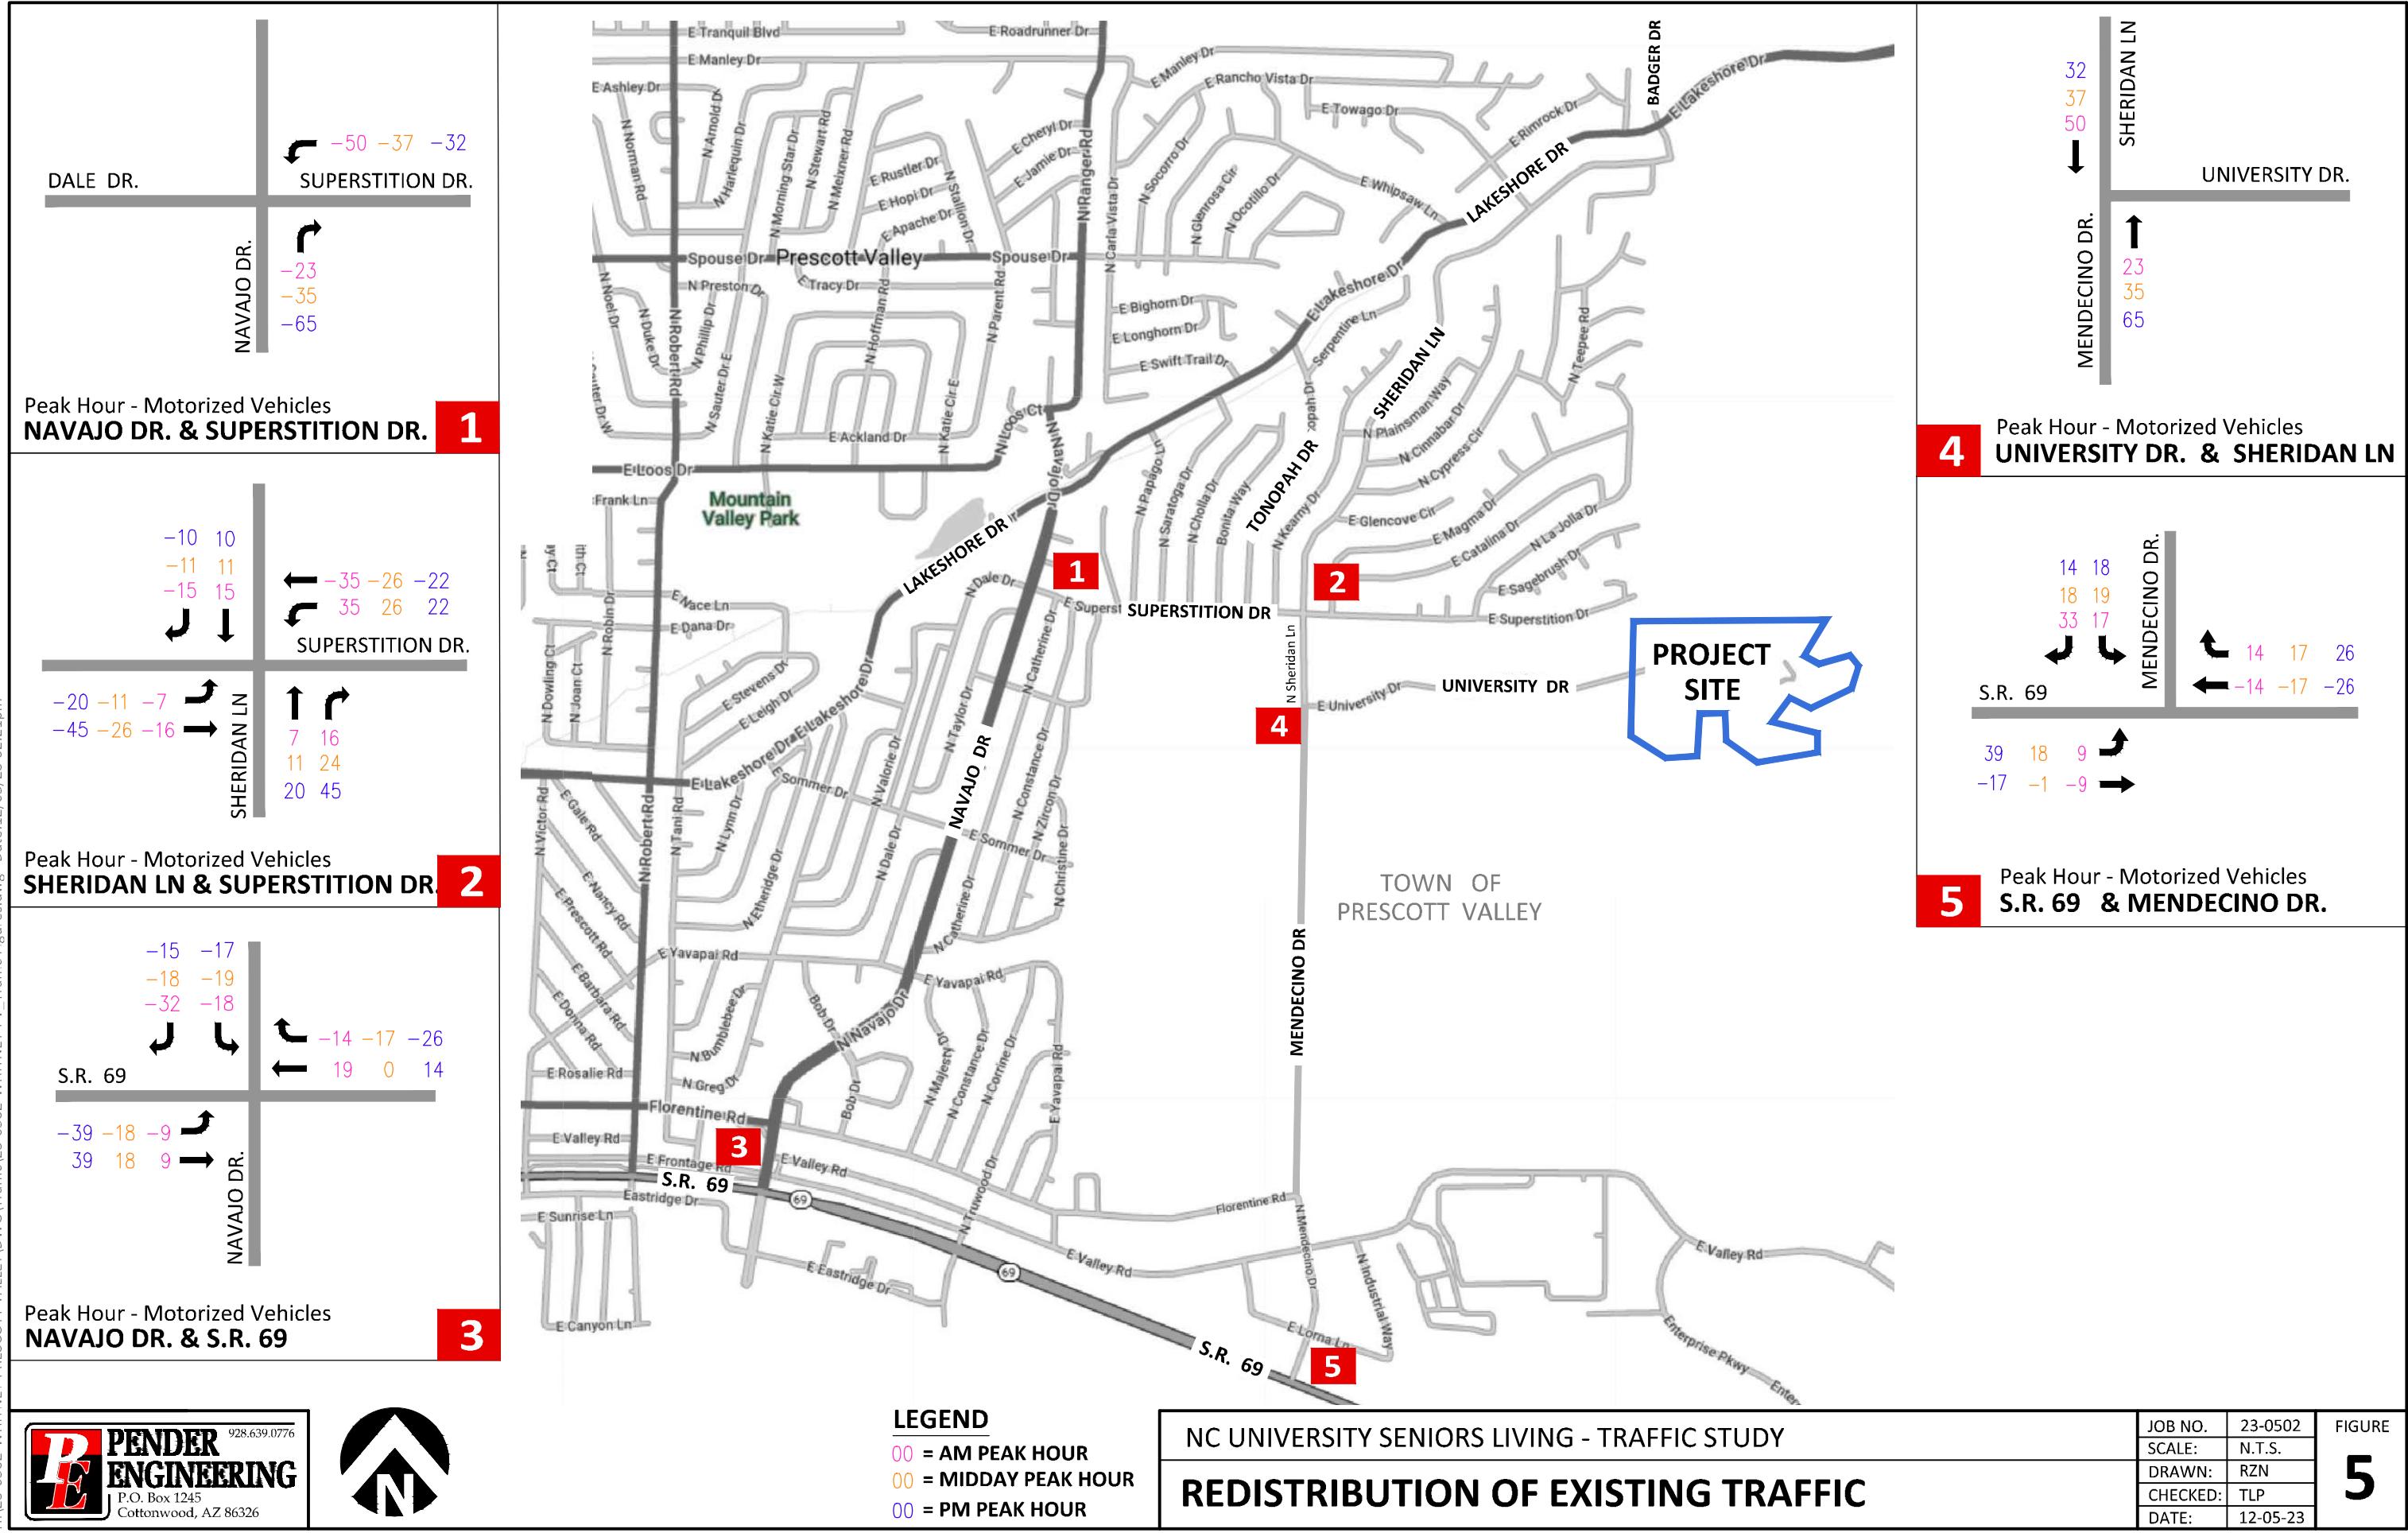

Background traffic is non-site generated traffic already present on the adjacent street plus any growth forecasted to the existing traffic between the existing counts and the future buildout year of NCSH. Based on the ADOT Transportation Data Management System, existing traffic volumes are expected to increase at approximately 2.5% per year over the three (3) year buildout period. This increase was applied to existing through movements along SR 69.

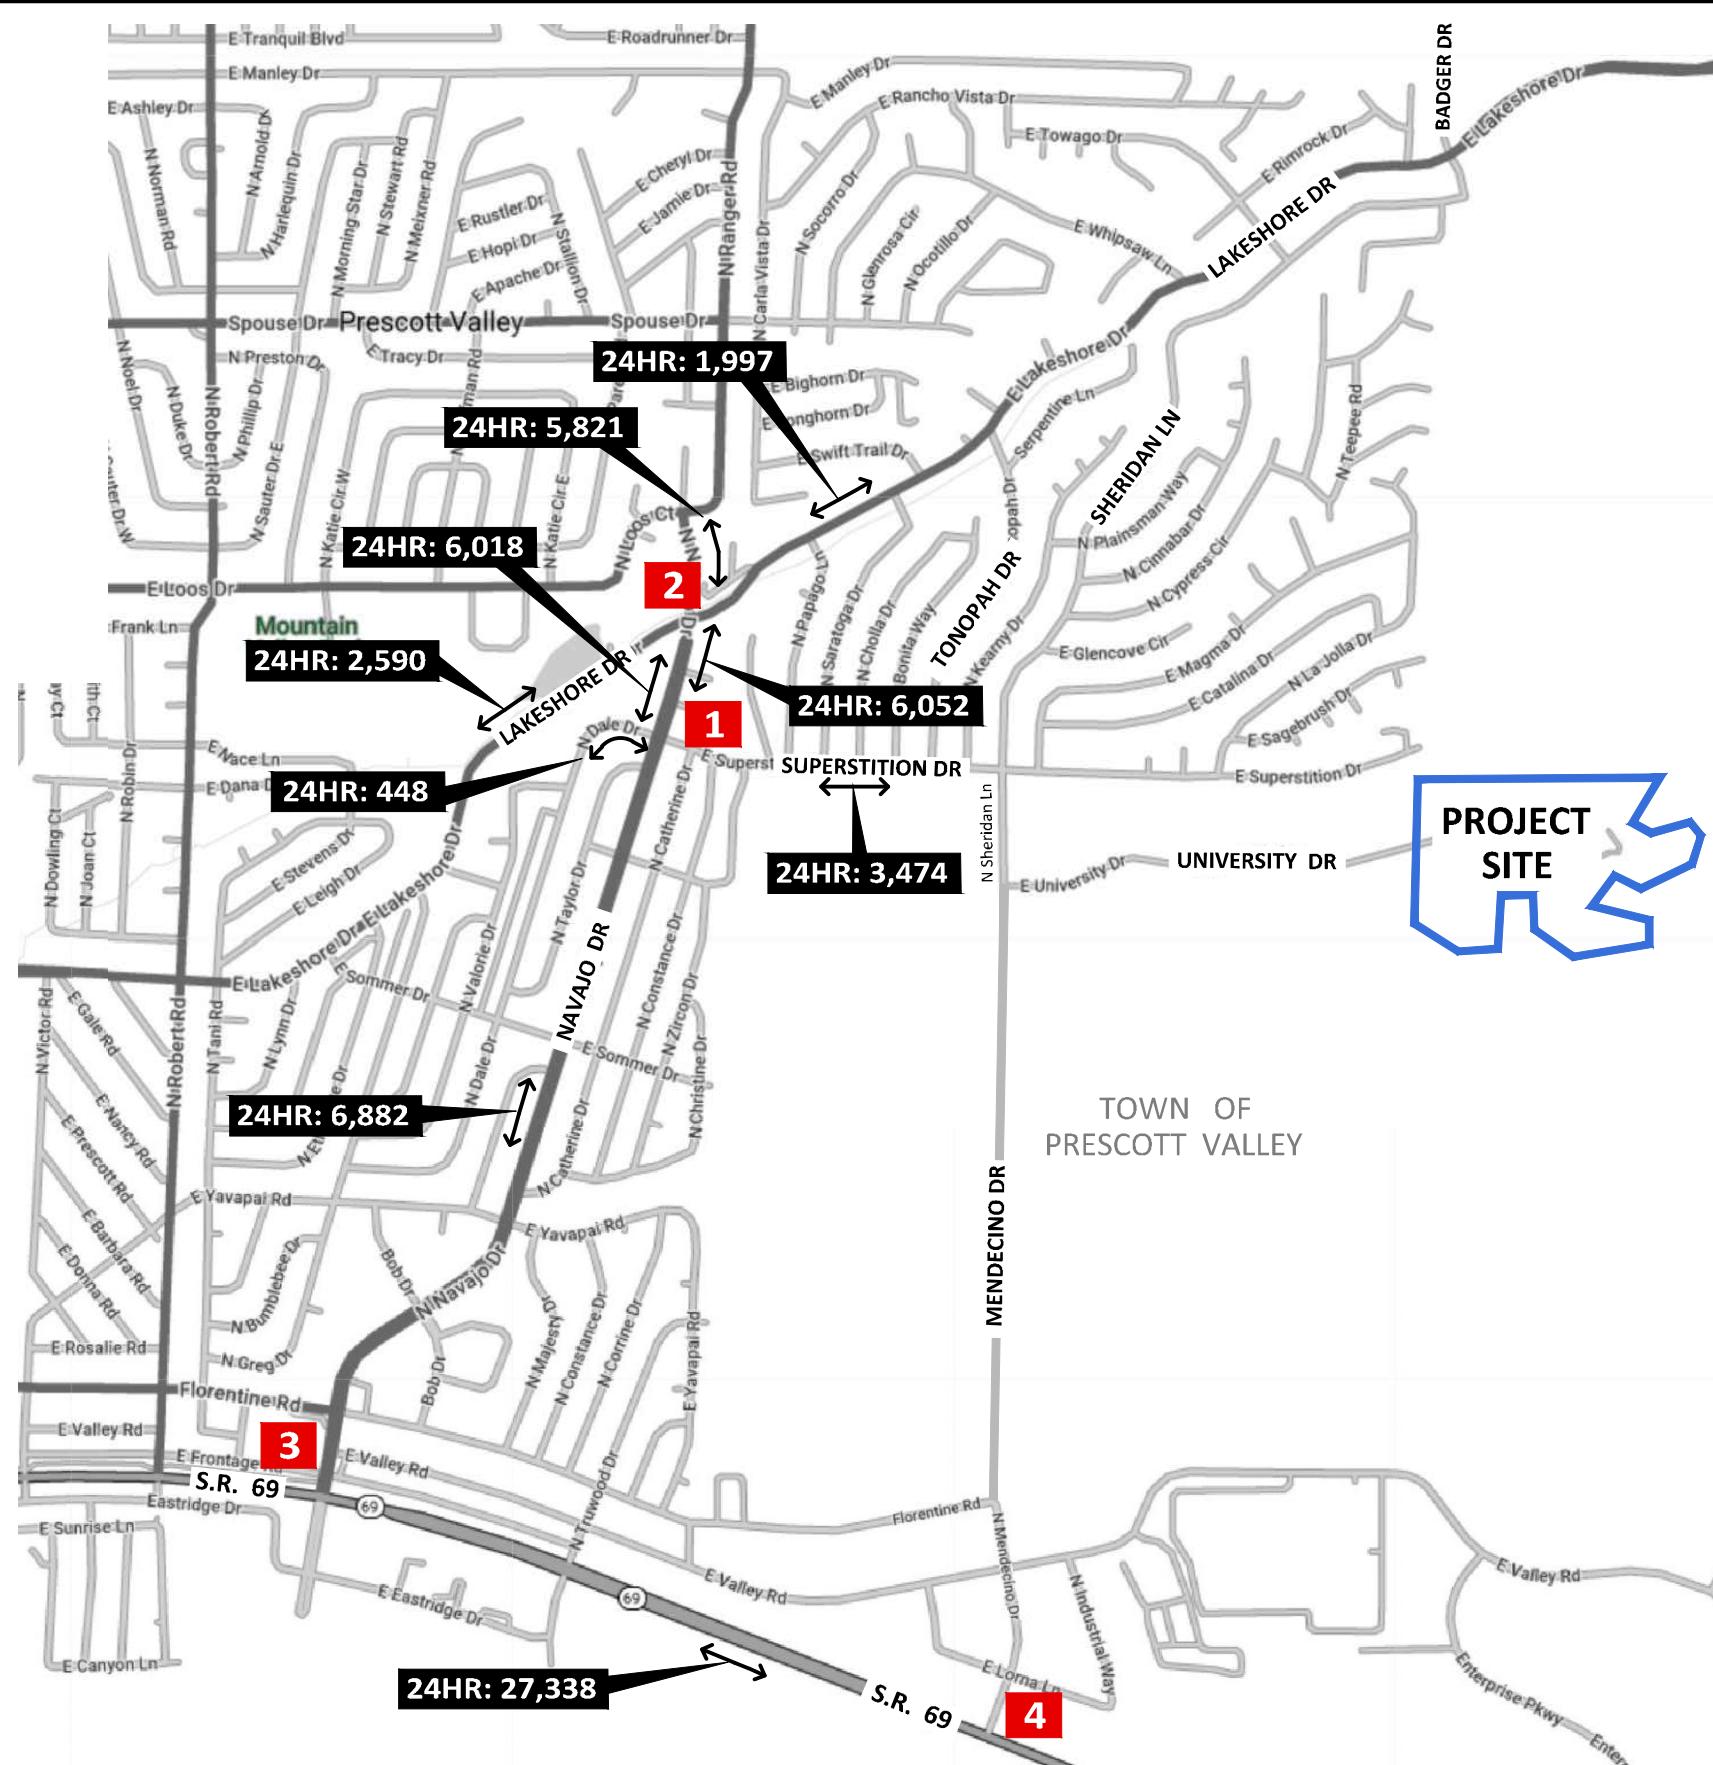

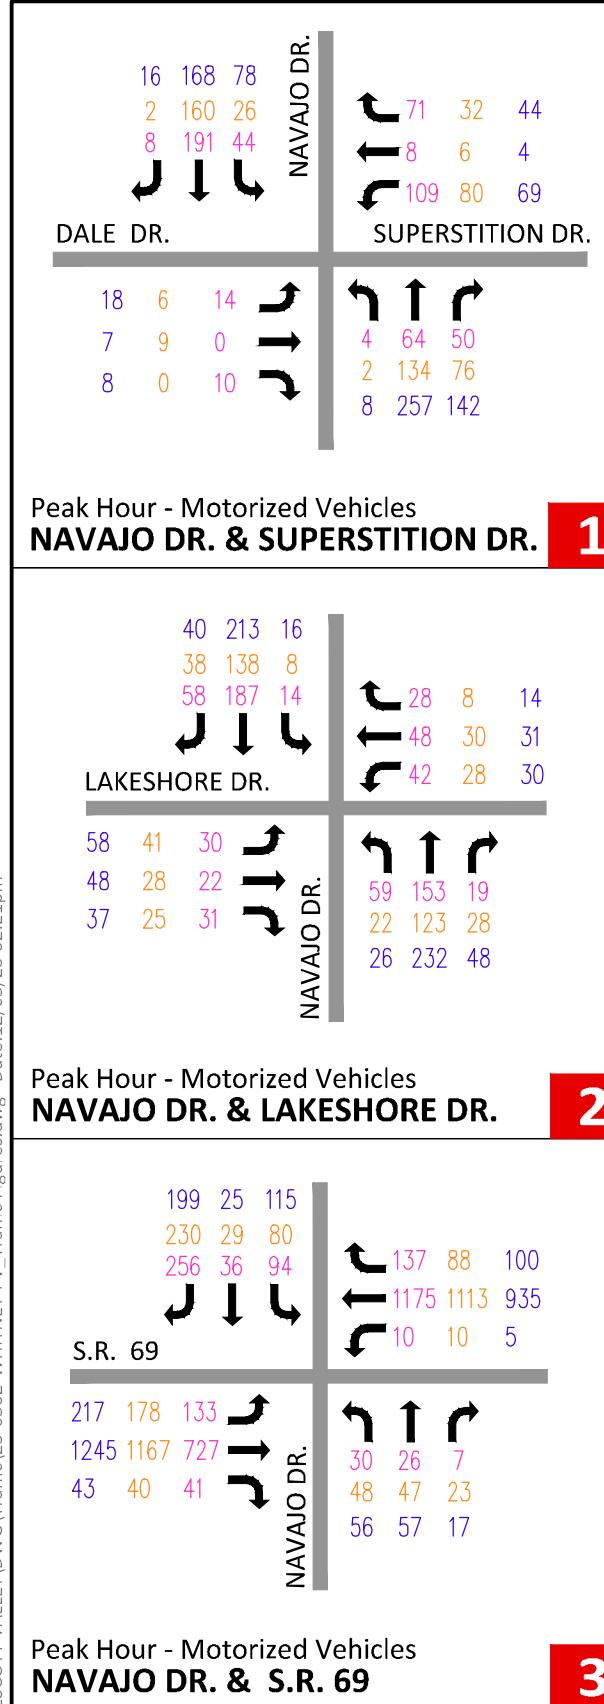

Based upon Town of Prescott Valley historical counts, neither E. Lakeshore Drive nor N. Navajo Drive are expected to significantly change during the buildout horizon. Background volumes at buildout are shown in **Figure 6**.

#### **4.5 Total Traffic**

Total Traffic at buildout of NCSH was derived by adding background traffic, site generated traffic, and redistribution of existing traffic. These forecasted total volumes are shown in **Figure 7**

## 5.0 TRAFFIC ANALYSIS

Traffic operations at intersections are typically evaluated in terms of “Level of Service” or LOS. The LOS is a measurement of delay incurred at an intersection or for a particular movement. LOS is defined by the Transportation Research Board’s Highway Capacity Manual (HCM) from which LOS A represents free flow conditions with minimal delays. LOS F represents congested conditions. Generally, a LOS D or better is considered acceptable.

**Table 2** shows the HCM criteria for both signalized and unsignalized intersections.

**Table 2 Level-of-Service Definitions**

Level of Service	Control Delay per Vehicle (seconds)	
	Unsignalized Intersections	Signalized Intersections
A	< 10	< 10
B	> 10 and < 15	> 10 and < 20
C	> 15 and < 25	> 20 and < 35
D	> 25 and < 35	> 35 and < 55
E	> 35 and < 50	> 55 and < 80
F	> 50	> 80

Capacity analyses were completed based on the counts shown in **Figure 4** and utilizing the existing timing and phasing plan provided by ADOT for the signalized off-site study area intersection at N. Navajo Drive at SR 69. Also peak-hour factors are used in the capacity analyses in order to convert raw volumes into flow rates and consider volume fluctuations during the peak hour. The results of the capacity analyses for existing traffic are shown in **Table 3** and capacity analysis worksheets are included in **Appendix B**.

**Table 3 – Existing Conditions Level-of-Service (LOS)**

Intersection/Approach	Control	2023 AM Peak Hour		2023 Midday Peak Hour		2023 PM Peak Hour	
		LOS	Delay (sec)	LOS	Delay (sec)	LOS	Delay (sec)
SR 69 / N. Navajo Dr.	Signal	B	19.0	C	22.4	C	23.5
Eastbound SR 69		C	23.9	C	22.3	C	22.3
Westbound 69		C	32.7	D	43.2	D	43.3
Southbound Navajo		C	31.9	D	43.2	D	42.2
Northbound Navajo		<b>C</b>	<b>24.0</b>	<b>C</b>	<b>26.0</b>	<b>C</b>	<b>26.7</b>
<b>Overall Intersection</b>							
SR 69 / N. Mendecino	STOP SB	LOS	Delay (sec)	LOS	Delay (sec)	LOS	Delay (sec)
Eastbound Left SR 69		C	15.4	B	11.7	E	36.8
Southbound Mendecino		F	96.2	E	35.6	B	10.7

**Table 3(continued) – Existing Conditions Level-of-Service (LOS)**

Intersection/Approach	Control	2023 AM Peak Hour		2023 Midday Peak Hour		2023 PM Peak Hour	
Lakeshore / Navajo Dr.	Stop EB and WB	LOS	Delay (sec)	LOS	Delay (sec)	LOS	Delay (sec)
Eastbound Lakeshore		C	15.3	B	12.5	C	20.1
Westbound Lakeshore		C	17.4	B	12.6	C	17.7
Superstition / Navajo	Stop EB and WB	LOS	Delay (sec)			LOS	Delay (sec)
Eastbound Dale		B	15.8	B	12.8	B	14.5
Westbound Superstition		B	18.3	B	12.3	C	16.2

Site generated traffic from **Figure 4** were added to Redistributed Traffic in **Figure 5** and Background Traffic in **Figure 6** which results in Total traffic conditions shown on **Figure 7**. These total traffic volumes were analyzed, and the level-of-service and delays are shown in **Table 4**. LOS worksheets are included in **Appendix B**.

**Table 4 – Total Traffic Level-of-Service (LOS)**

Intersection/Approach	Control	2023 AM Peak Hour		2023 Midday Peak Hour		2023 PM Peak Hour	
SR 69 / N. Navajo Dr.	Signal	LOS	Delay (sec)	LOS	Delay (sec)	LOS	Delay (sec)
Eastbound SR 69		B	18.0	C	20.9	C	22.8
Westbound 69		C	23.3	C	21.5	C	20.9
Southbound Navajo		D	36.2	D	43.9	D	43.9
Northbound Navajo		D	34.7	D	43.1	D	42.2
<b>Overall Intersection</b>		<b>C</b>	<b>23.5</b>	<b>C</b>	<b>24.5</b>	<b>C</b>	<b>25.6</b>
SR 69 / N. Mendecino	STOP SB						
Eastbound Left SR 69		C	17.6	B	13.9	B	12.0
Southbound Mendecino		F	852.7	F	579.1	F	482.9
Lakeshore / Navajo Dr.	Stop EB and WB						
Eastbound Lakeshore		C	15.8	B	12.7	C	21.2
Westbound Lakeshore		C	18.3	B	13.0	C	18.6
Superstition / Navajo	Stop EB and WB						
Eastbound Dale		B	11.7	B	13.3	C	15.0
Westbound Superstition		B	10.8	B	11.2	B	13.4

The results of this analyses indicate that each off-site intersection (except for N. Mendecino Drive at SR 69) are forecasted to operate satisfactorily at buildout. At N. Mendecino Drive / SR 69 the southbound single lane approach currently operates above capacity during the AM Peak hour. Adding an additional lane to separate left turns from right turns only marginally improves existing conditions. In order to provide capacity for exiting traffic from both NCSH and Prescott Valley Unit 20 traffic signal control would need to be employed. It is not believed that forecasted volumes at build out of NCSH would satisfy MUTCD warrants for signalization.

It should be noted however, that field review at N. Mendecino / SR 69 (along with confirmation from ADOT staff) that subsurface preparation has already been made for a future traffic signal at this intersection. As development continues, along the extended portion of N. Mendecino, a traffic signal will likely be the appropriate form of traffic control at the SR 69 intersection.
